Issue to be solved

Nexter Systeme a SEDOC customer, had developed the need to increase its 3D content production across a number of commercial defence based projects. In order to meet this need for higher volume production and improved 3D quality content, they decided to collaborate with SEDOC (Sonovision Group), their documentation sub-contractors, and are currently generating 3D Parts Catalogues from the DMU.

Reason for selecting Cortona3D / criteria for selection

In order to deliver the IPC within the required timeframe, SEDOC had to be able to implement a 3D authoring tool in as short a time as possible. They required the tool to be quickly deployed and compliant with their customers' requirements and consequently, SEDOC made the decision to invest in RapidCatalog, based on the tools ease of use and the fact that it perfectly matched SEDOCs' technical team's expectations for their 3D IPC projects.

Plans for implementation

To date, the IPC project has been very successful for SEDOC, their customers and their end-users. SEDOC had effectively adopted the 3D based technical publication movement and as a result, were able to demonstrate the result at the Eurosatory show. This has been so successful for SEDOC, that their new IPC projects are already scheduled, to use the Cortona3D Rapid tools and SEDOC is also encouraging their customers to adopt the 3D Authoring tools.

Three reasons they bought this product from us
<ul style="list-style-type: none">- RapidCatalog rapidly met their requirements- Reactivity and support of sales and support team
Company / division / department description
Sedoc is part of SONOVISION-ITEP Group which is one of the European leaders in technical documentation and documentary engineering as well as translation and risk management. Sedoc comprises: 180 people across 3 agencies in France (Evry, Grenoble, Montigny)
